Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application.

Listing of Claims:

- 1.-20. (Cancelled)
- 21. (Amended) A method of enhancing an immune a cytotoxic T-lymphocyte response in an organism to a tumor antigen cells which express low to non-detectable levels of peptide/MHC class 1 complexes on the cell surface, comprising:

administering an effective amount of an agent that can augment the level of a TAP-1 molecule in a target cell bearing the tumor antigen to a cell or animal in need thereof,

wherein the agent is a vector comprising ex vivo a nucleic acid sequence encoding the a TAP-1 molecule into said tumor cells;

irradiating said tumor cells; and

introducing said tumor cells containing TAP-1 nucleic acid sequences into said organism.

wherein the vector is capable of transforming the target cell so that the expression of TAP 1 is increased and the immune response to the tumor antigen is enhanced.

22-24. (Cancelled)

- 25. (Amended) The method according to claim 21, wherein the animal organism is also subjected to surgery, radiation, chemotherapy, immunotherapy or photodynamic therapy.
- 26. (Amended) The method according to claim 21, wherein the agent is administered said introducing step is performed intraperitoneally, intratumorally, subcutaneously, intravenously, orally, mucosally, submucosally or intradermally.
- 28. (Previously presented) The method according to claim 27 31 wherein the viral vector is selected from the group consisting of vaccinia based vectors, adenovirus based vectors, lenti virus based vectors and HSV based vectors.
- 29-30. (Cancelled)

(Cancelled)

27.

31. (New) A method of enhancing a cytotoxic T-lymphocyte response in an organism to tumor cells which express low to non-detectable levels of peptide/MHC class 1 complexes on the cell surface, comprising:

introducing into the organism, at a location into or near the tumor cell a viral vector encoding a TAP-1 molecule into in a manner which causes uptake by said tumor cells of said viral vector, resulting in the expression of TAP-1 in said tumor cells.
